Technical Information
- Control through WiFi from a mobile phone, PC, automation system or any other Device supporting HTTP and/or UDP protocol.
- Microprocessor management.
- Controlled elements: 1 electrical circuits/appliances.
- Controlling elements: 1 relays.
- Shelly may be controlled by an external button/switch.

CAUTION! Danger of electrocution. Mounting the Device to the power grid has to be performed with caution.

CAUTION! Do not allow children to play with the button/switch connected the Device. Keep the Devices for remote control of Shelly (mobile phones, tablets, PCs) away from children.

Introduction to Shelly
Shelly® is a family of innovative Devices, which allow remote control of electric appliances through mobile phone, PC or home automation system. Shelly® uses WiFi to connect to the devices controlling it. They can be in the same WiFi network or they can use remote access through the Internet. Shelly® may work standalone, without being managed by a home automation controller, in the local WiFi network, as well as through a cloud service, from everywhere the User has internet access.

Shelly® has an integrated web server, through which the User may adjust, control and monitor the Device. Shelly® has two WiFi modes - access Point (AP) and Client mode (CM). To operate in Client Mode, a WiFi router must be located within the range of the Device. Shelly® devices can communicate directly with other WiFi devices through HTTP protocol.

An API can be provided by the Manufacturer. Shelly® devices may be available for monitor and control even if the User is outside the range of the local WiFi network, as long as the WiFi router is connected to the Internet. The cloud function could be used, which is activated through the server of the Device or through the settings in the Shelly Cloud mobile application.

The User can register and access Shelly Cloud, using either Android or iOS mobile applications, or any internet browser and the web site: https://my.shellycloud/

Installation Instructions
CAUTION! Danger of electrocution. The mounting/installation of the Device should be done by a qualified person (electrician).

CAUTION! Danger of electrocution. Even when the Device is turned off, it is possible to have voltage across its clamps. Every change in the connection of the clamps has to be done after ensuring all local power is powered off/disconnected.

CAUTION! Do not connect the Device to appliances exceeding the given max load!

CAUTION! Connect the Device only in the way shown in these instructions. Any other method could cause damage and/or injury.

CAUTION! Before beginning the installation please read the accompanying documentation carefully and completely. Failure to follow recommended procedures could lead to malfunction, danger to your life or violation of the law. Altecor Robotics is not responsible for any loss or damage in case of incorrect installation or operation of the Device.

CAUTION! Use the Device only with power grid and appliances which comply with all applicable regulations.

RECOMMENDATION: The Device may be connected to and may control electric appliances and circuits only if they comply with the respective standards and safety norms.

RECOMMENDATION: The Device may be connected with solid single-core cables with increased heat resistance to insulation not less than PVC T105°C.

Initial Inclusion
Before installing/mounting the Device ensure that the grid is powered off (turned down breakers). Connect the Relay to the power grid and install it in the console behind the switch/power socket following the scheme that suits the desired purpose:
1. Connecting to the power grid with power supply 110-240V AC or 24-60V DC - fig. 1
2. Connecting to the power grid with power supply 12V DC - fig. 2

For more information about the Bridge, please visit: http://shelly-api-docs.shelly.cloud/shelly-family-overview or contact us at: developers@shellycloud

Shelly Cloud gives you opportunity to create scenes for automatic turning on or off of the Devices at predefined hours or based on other parameters like temperature, humidity, light etc. (with available sensor in Shelly Cloud).

Shelly Cloud allows easy control and monitoring using a mobile phone, tablet or PC.

Device Inclusion
To add a new Shelly device, install it to the power grid following the Installation Instructions included with the Device.

Step 1
After the installation of Shelly following the Instruction and the power is turned on, Shelly will create its own WiFi Access Point (AP).

WARNING: In case the Device has not created its own AP WiFi network with SSID like shelly1-35FA58, please check if the Device is connected accordingly to the Installation Instructions. If you still do not see an active WiFi network with SSID like shelly1-35FA58, or you want to add the Device to another WiFi network, reset the Device. If the Device has been powered on, you have to restart by powering it off and on again. After turning the power on, you have one minute to press 5 consecutive times the button/switch connected SW. You have to hear the Relay trigger itself. After the trigger sound, Shelly should return to AP Mode. If not, please repeat or contact our customer support at: support@shellycloud

Step 2
Choose “Add Device”.

In order to add more Devices later, use the app menu at the top right corner of the main screen and click “Add Device”.

Type the name (SSID) and password for the WiFi network, to which you want to add the Device.

Step 3
If using IOS: you will see the following screen:

Press the home button of your iPhone/iPad/iPod. Open Settings > WiFi and connect to the WiFi network created by Shelly, e.g. shelly1-35FA58.

If using Android: your phone/tablet will automatically scan and include all new Shelly Devices in the WiFi network that you are connected to.

Upon successful Device inclusion to the WiFi network you will see the following pop-up:

Shelly Cloud gives you opportunity to create scenes for automatic turning on or off of the Devices at predefined hours or based on other parameters like temperature, humidity, light etc. (with available sensor in Shelly Cloud).

Shelly Cloud allows easy control and monitoring using a mobile phone, tablet or PC.

Power supply:
- 110-240V 50/60Hz AC
- 24-60V DC
- 12V DC

Max load: 16A/240V

Complies with EU standards:
- RE Directive 2014/53/EU
- LVD 2014/35/EU
- EMC 2004/108/WE
- RoHS2 2011/65/EU

Working temperature: -40°C up to 80°C

Radio signal power: 1mW

Radio protocol: WiFi 802.11 b/g/n

Frequency: 2400 – 2500 MHz

Operational range (depending on local construction):
- up to 50 m outdoors
- up to 30 m indoors

Dimensions (HxWxL): 47 x 36 x 17 mm

Electrical consumption: < 1 W
Step 4:
Approximately 30 seconds after discovery of any new devices on the local WiFi network, a list will be displayed by default in the “Discovred Devices” room.

Step 5:
Enter Discovered Devices and choose the Device you want to include in your account.

Step 6:
Enter a name for the Device (in the Device Name field). Choose a Room, in which the Device has to be positioned. You can choose an icon or add a picture to make it easier to recognize. Press “Save Device”.

Step 7:
To enable connection to the Shelly Cloud service for remote control and monitoring of the Device, press “YES” on the following pop-up.

Shelly Devices Settings

After your Shelly device is included in the application, you can control it, change its settings and automate the way it works. To switch the Device on and off, use the respective ON/OFF button. To enter at the details menu of the respective Device, simply click on it’s name.

From the details menu you may control the Device, as well as edit its appearance and settings.

EDIT DEVICE – allows you to change the Device’s name, room and picture.

DEVICE Settings – allows you to change settings. For example, with Restrict login you may enter a username and password to restrict access to the embedded web interface in Shelly. You may automate the Device operations from this menu as well.

Timer

To manage the power supply automatically, you may use:
Auto OFF: After turning on, the power supply will automatically shut down after a predefined time (in seconds). A value of 0 will cancel the automatic shutdown.
Auto ON: After turning off, the power supply will be automatically turned on after a predefined time (in seconds). A value of 0 will cancel the automatic power-on.

Weekly schedule

This function requires an Internet connection. To use Internet, a Shelly Device has to be connected to a local WiFi network with working internet connection. Shelly may turn off automatically at a predefined time and day throughout the week. You may add unlimited number of weekly schedules.

Sunrise/Sunset

This function requires an Internet connection. To use Internet, a Shelly Device has to be connected to a local WiFi network with working internet connection. Shelly receives actual information through the Internet about the time of sunrise and sunset in your area. Shelly may turn on or off automatically at sunrise/sunset, or at a specified time before or after sunrise/sunset.

Settings:

Power On Default Mode

This setting controls whether the Device will supply power or not the output as a default whenever it is receiving power from the grid.
ON: When the Device is powered, by default the output will be powered.
OFF: Even if the Device is powered, by default the socket will not be powered.
Restore Last Mode: When power is restored, by default, the appliance will return to the last state it was in before the last power off/shutdown.

Button Type

- Momentary – Set Shelly input to be buttons. Push for ON, push again for OFF.
- Toggle Switch – Set Shelly input to be flip switches, with one state for ON and another state for OFF.

Firmware Update: Shows present firmware version. If a newer version is available, you can update your Shelly Device by clicking Update.

Factory reset: Reset Shelly from your account and return it to its factory settings.

Device Information: Here you can see the unique ID of Shelly and the IP it got from the WiFi network.

Managing in Relay Mode

Relay Screen

In this screen you can control, monitor and change the settings for turning the power on and off. You can also see the current status of the connected appliance to Shelly. Buttons Settings, On and Off.

To control Shelly press Relay:
To turn on the connected circuit press “Turn ON”.
To turn off the connected circuit press “Turn OFF”
Press the icon to go to the previous menu.

Shelly Management Settings

Each Shelly can be configured individually. This lets you personalize each Device in a unique manner, or consistently, as you choose.

Power On Default State

This sets the relays’ default state when powered from the power grid.
ON: By default when the Device is powered and the connected circuit/appliance to it will be powered as well.
OFF: By default the Device and any connected circuit/appliance will not be powered, even when it is connected to the grid.

Restore Last State:
By default the Device and the connected circuit/appliance will be returned to the last state they occupied (on or off) before the last power off/shutdown.

Auto ON/OFF

Automatic powering/shutdown of the socket and the connected appliance:
Auto OFF after: After turning on, the power supply will be automatically shut down after a predefined time (in seconds). A value of 0 will cancel the automatic shutdown.
Auto ON after: After turning off, the power supply will be automatically turned on after a predefined time (in seconds). A value of 0 will cancel the automatic start.

Manual Switch Type

- Momentary – When using a button.
- Toggle Switch – When using a switch.
- Edge switch – Change status on every hit.

Sunrise/Sunset hours

This function requires an Internet connection. To use internet, a Shelly Device has to be connected to a local WiFi network with a working Internet connection. Shelly receives actual information through the internet about the time of sunrise and sunset in your area. Shelly may turn on or off automatically at sunrise/sunset, or at a specified time before or after sunrise/sunset.

On/Off schedule

This function requires an Internet connection. To use internet, a Shelly Device has to be connected to a local WiFi network with working internet connection. Shelly may turn on/off automatically at a predefined time. Shelly may turn on/off automatically at a predefined time.
